

18.12.2014 Reaching high: Dana invests in high-bay warehouse in Neu-Ulm

Neu-Ulm, Germany, December 2014. Dana is expanding its Neu-Ulm location by adding a high-bay warehouse for the Aftermarket division. The new addition is a multi-million euro investment scheduled for completion in October 2015.

The expansion of the high-bay warehouse will add 67 m in length, 10 m in width and 19 m in height to make extra storage space for 17,000 Victor Reinz® products. The expected pick capacity is 1.4 million articles removals per year. Together with the existing high-bay warehouse (built in 1984), the Dana service parts warehouse will then have space for 45 million cylinder-head gaskets, oil seals, and turbocharger mounting kits.¹

“The Victor Reinz service part range is constantly being improved and refined and enjoys steady increases in turnover. Roughly 1,000 new items are being added each year. Adding to our high-bay warehouse will enable us to expanding our worldwide aftermarket service even further, keeping a wider variety of service parts in stock and supplying

our customers with the speed they're used to," explains Bernhard Obermeier, project manager in charge of expanding the high-bay warehouse. "That's a major competitive advantage!"

The high-bay warehouse is being constructed as a silo with an automated small parts storage system in which shelf structures, walls, and ceiling form a single unit. State-of-the-art storage and retrieval machines transport the article containers at speeds of up to 6 m/s. These newly developed boxes are tailored to the dimensions of current and future articles and make ideal use of our storage capacities.
